Prettier

The VS Code extension that improved my day-to-day editing experience the most was Prettier because it automatically formats code and maintains consistent indentation and spacing. Python and Java extensions help with language-specific coding features such as IntelliSense, running programs, and debugging. Prettier focuses on code formatting, while GitLens helps track code history and identify who made changes. Live Share supports collaboration by allowing multiple students to edit the same file in real time. I would keep Prettier and GitLens enabled for most projects, while Python and Java extensions are useful when working with their respective languages. Live Share makes pair programming more interactive than ordinary screen sharing because both students can work directly on the same code and see each other's cursors and edits.
